

ABSTRACT

A method and system are disclosed to access different forms of audio, video or other digital entertainment content, for example, content that is stored on a home PC or in audio, video or other storage devices, or content that is made available through a transmission, streaming or download. A method and system according to the present disclosure will facilitate access to this content and its distribution to appropriate audio, video or other digital devices for playback. The method and system allows end users to access their content without having to physically go to the device or system that stores or first receives the content. They can have it delivered to wherever they would like to listen, view or otherwise enjoy or consume the content. It further allows for a very intuitive, visual and convenient way to organize and manage digital content.
